

StripeCashOps

Project specification for Stripe Hackathon, October 3, 2026

Builder: Hossam Elshahaby | Track: Accounting | Live demo: <https://stripecashops.lovable.app>

Problem

Business owners and service providers spend too much time checking old invoices, receipts, bank statements, and payment records manually. The result is slow payment follow-up, hidden overdue invoices, and weak cash-flow visibility.

Solution

StripeCashOps is an invoice-to-cash assistant that turns accounting documents into payment actions. It identifies recoverable cash, creates Stripe payment links, and prepares reminder emails so the owner can act quickly.

Core Features

- Cash recovery dashboard with overdue amount and recoverable cash.
- Document inbox for invoices, receipts, restaurant tickets, and payment records.
- Risk detection for overdue invoices, duplicate IDs, partial payments, and VAT mismatches.
- Stripe payment-link workflow for selected overdue invoices.
- Brevo reminder-email integration using a verified sender for the demo.
- Copyable reminder drafts as fallback when live email sending is unavailable.

Architecture

Layer	Role
Frontend	Lovable web app hosted at stripecashops.lovable.app
Accounting logic	Extracts invoice fields, ranks overdue items, and prepares actions
Stripe	Creates payment links and supports test-mode payment flows
Brevo	Sends reminder emails from a verified sender for the MVP
Fallback	Shows copyable email drafts when an external service fails

Demo Flow

- Open the live app and review the cash recovery dashboard.
- Select an overdue invoice from the recovery center.
- Generate or display a Stripe payment link.

- Draft or send a reminder email through the Brevo workflow.
- Track the invoice as ready to send, pending, or paid.

Impact

StripeCashOps reduces manual accounting work and shortens the time between finding an overdue invoice and asking for payment. For small businesses, the main value is faster cash recovery and clearer visibility into unpaid work.

Roadmap

- Verified business sending domains for stronger email deliverability.
- Stripe webhooks for real payment-status updates.
- OCR for uploaded invoices and receipts.
- Bank transaction import and reconciliation.
- Accountant review queues for low-confidence matches.

Hackathon Submission Summary

Field	Value
Project name	StripeCashOps
Builder	Hossam Elshahaby
Date	October 3, 2026
Track	Track 2 - Accounting
Live URL	https://stripecashops.lovable.app
One-line pitch	AI invoice-to-cash assistant for faster payment recovery.
